The Camv identity

Camv is a global video-calling platform built to make remote meetings feel **clear, direct, and human**. It launches with individual professionals in mind, with a GCC and Middle East focus, and is designed to scale naturally across international teams and organisations.

The approved identity centres on **Human Alignment**: two equal forms move toward a clear shared opening. The symbol represents attentive, face-to-face connection without relying on a literal camera, play button, or speech bubble. It is confident and professional, with sufficient warmth for a product that brings people together.

Core promise and voice

> **Meet clearly. Work naturally.**

Camv speaks with concise confidence. It is helpful and human, never overly technical, cold, or casual. Lead with the outcome people feel—being present, understood, and ready to move work forward—then support it with clear product detail.

Use

Clear, calm, direct language. “Join in seconds.”
“Meet clearly.” “Keep the conversation moving.”

Avoid

Jargon, exaggerated claims, cultural stereotypes, and generic corporate phrases such as “seamless synergy” or “disruptive communications.”

Logo system

Primary horizontal logo

Use the primary logo on light surfaces whenever colour reproduction is available. The wordmark and left emblem form use Camv Ink; the right emblem form uses Camv Coral. The primary logo is the default signature for websites, product marketing, presentations, and documents.

Reverse and monochrome logos

Use the reverse logo only on Camv Ink or similarly dark, high-contrast backgrounds. Use monochrome Ink for one-colour printing on light stock and monochrome white for restricted production on dark stock.

Emblem and app icon

The emblem may appear alone when the Camv name is already established, including as a browser favicon, social avatar, app icon, or compact product marker. Never redraw, stretch, rotate, crop, or add effects to the emblem.

Clear space and minimum size

Clear space

Maintain clear space equal to the width of the central shared opening in the emblem around every side of the complete logo. No text, interface element, graphic, or page edge should enter this area. When practical, increase this space rather than reducing it.

Minimum size

For digital use, the horizontal logo should not appear smaller than **120 px wide**. The standalone emblem should not appear smaller than **20 px**; use the 32 px favicon or a larger supplied icon where browser support allows. In print, keep the horizontal logo at or above **28 mm wide** and the emblem at or above **5 mm**.

Unacceptable uses

Do not alter the approved proportions or colour relationship. Do not substitute unapproved fonts, add gradients, outlines, drop shadows, containers, or patterns. Do not place the primary logo on busy imagery or insufficiently contrasting backgrounds. Do not use only one half of the emblem, as the paired relationship is part of the approved concept.

Colour system

The palette is intentionally compact. Camv Ink provides professional authority and strong readability. Camv Coral brings a human, responsive accent. Slate supports secondary text and interface detail, while Mist provides a soft neutral surface.

Camv Ink

#102A5C

Primary wordmark, dark surfaces, headings, key interface anchors.

Camv Coral

#F06C62

Human accent, right emblem form, selective calls to action.

Camv Slate

#536174

Body text, supporting interface labels, secondary information.

Camv Mist

#F5F7FA

Light product surfaces and understated backgrounds.

Colour accessibility

Use Camv Ink for primary text on white or Mist backgrounds. Coral is an accent, not a small-text colour. On Ink surfaces, use white for text and use Coral selectively for emphasis. Maintain sufficient contrast in all product and marketing applications; never rely on colour alone to communicate status or meaning.

Typography

The approved primary typeface is **Noto Sans**. Its open, neutral construction supports confident professionalism and broad international language coverage. The wordmark in the production SVG files has been converted to vector paths to preserve the approved appearance in logo use.

Primary family	Noto Sans
Weights	Regular (400) for body copy; Bold (700) for headings, navigation, and controlled emphasis.
Wordmark	Noto Sans Bold, converted to outlined vectors in all supplied production lockups.
Files included	fonts/NotoSans-Regular.ttf and fonts/NotoSans-Bold.ttf
License	SIL Open Font License 1.1. The included font files may be used, embedded, and redistributed under the terms provided in fonts/OFL-1.1.txt.

Type principles

Use sentence case for headlines and interface labels unless a technical context requires otherwise. Favor short, direct statements with generous line spacing. Use Bold for hierarchy rather than excessive colour changes. For Arabic and other script needs, deploy the matching Noto family weight and test bilingual layouts with appropriate local typographic review.

Landing-page messaging

The landing page should lead with a clear human outcome, then show capability. Avoid positioning Camv as a copy of another platform. The message should remain internationally understandable while feeling relevant to professionals connecting across distance, time zones, and organisations.

Recommended hero

Meet clearly. Work naturally.

Camv brings people face to face for clearer conversations and more natural work—from anywhere.

Start a meeting

Supporting messages

- Better video meetings, simply.
- Be there, from anywhere.
- A clearer way to meet, speak, and move work forward.
- Bring the room together, wherever everyone is.

Final production checklist

The approved core system consists of the Human Alignment emblem, the outlined Noto Sans Bold wordmark, Camv Ink #102A5C, and Camv Coral #F06C62. Use only the supplied SVG and PNG files for logo reproduction. Preserve the icon's paired form and central opening, observe clear space, and select the appropriate light, reverse, or monochrome file for the surface.
